TECTONIC SERIES

48" x 32" x 6"

translucent-painted aluminum, neon

The "Tectonic Series" is about stability and the universal forces constantly influencing and effecting change. In a natural extension of concepts first explored in the "Circle, Arc Series" and further developed in the "Composition Series," the "Tectonic Series" offers a more complex statement regarding the abstract representation of form and line. Referring to tectonics, the science of the movement of land masses, Ehlenberger contrasts forceful and imposing continent-like forms with multiple, wedge shaped layers and accentuating lines of light, each providing a sense of movement and interaction with one another.
